Subscription Rates
(Effective from 1989)

All countries except India	1 year	3 years	5 years
(Price includes AIR MAIL charges)	US$75	$200	$300
India	1 year	10 years	
	Rs. 75	Rs. 400	

Annual subscriptions are available for **Individuals** for India and abroad at the concessional rate of Rs. 25/- and $20/- respectively.

All correspondence regarding subscription should be addressed to **The Circulation Department** of the Academy.

CONTENTS

Number 1, February 1994

Special issue dedicated to the memory of Professor K G Ramanathan

Obituary note

On the equation $x(x+d_1)...(x+(k-1)d_1) = y(y+d_2)...(y+(mk-1)d_2)$..... ..... *N Saradha and T N Shorey* 1

The density of rational points on non-singular hypersurfaces..... ..... *D R Heath-Brown* 13

Multiplicative arithmetic of finite quadratic forms over Dedekind rings..... ..... *Anatoli Andrianov* 30

Non-surjectivity of the Clifford invariant map .... *R Parimala and R Sridharan* 49

Modular forms and differential operators ..... *Don Zagier* 57

On Fourier coefficients of Maass cusp forms in 3-dimensional hyperbolic space ..... *S Raghavan and J Sengupta* 77

On Zagier's cusp form and the Ramanujan τ function .... *Ashwaq Hashim and M Ram Murty* 93

Zeta functions of prehomogeneous vector spaces with coefficients related to periods of automorphic forms ..... *Fumihiro Sato* 99

On a problem of G Fejes Toth ..... *R P Bambah and A C Woods* 137

The number of ideals in a quadratic field ..... *M N Huxley and N Watt* 157

On the zeros of a class of generalised Dirichlet series – XIV .... *R Balasubramanian and K Ramachandra* 167

Local zeta functions of general quadratic polynomials ..... *Jun-ichi Igusa* 177

Vector bundles as direct images of line bundles .... *A Hirschowitz and M S Narasimhan* 191

Finite arithmetic subgroups of GL_n, III ..... *Yoshiyuki Kitaoka* 201

Reduction theory over global fields ..... *T A Springer* 207

Symplectic structures on locally compact abelian groups and polarizations ..... *R Ranga Rao* 217

Modular equations and Ramanujan's Chapter 16, Entry 29 ..... *George E Andrews* 225

Gaussian quadrature in Ramanujan's Second Notebook ..... *Richard Askey* 237

Two remarkable doubly exponential series transformations of Ramanujan ..... *Bruce C Berndt and James Lee Hafner* 245

Kolmogorov's existence theorem for Markov processes in C^* algebras ..... *B V Rajarama Bhat and K R Parthasarathy* 253

Iterations of random and deterministic functions ..... *K B Athreya* 263

Existence theory for linearly elastic shells ..... *Philippe G Ciarlet* 269

Absolutely expedient algorithms for learning Nash equilibria ..... *V V Phansalkar, P S Sastry and M A L Thathachar* 279

Hierarchic control ..... *J L Lions* 295

Number 2, May 1994

Bertini theorems for ideals linked to a given ideal ..... *Trivedi Vijaylaxmi* 305

On the Ramanujan–Petersson conjecture for modular forms of half-integral weight ..... *Winfried Kohnen* 333

On composition of some general fractional integral operators ..... *K C Gupta and R C Soni* 339

On the absolute matrix summability of Fourier series and some associated series ..... *B K Ray and A K Sahoo* 351

On absolute summability factors of infinite series ..... *Hüseyin Bor* 367

Rearrangements of bounded variation sequences ..... *Mehmet Ali Sarigöl* 373

A note on a generalization of Macdonald's identities for A_l and B_l ..... *N Sthanumoorthy and M Tamba* 377

Combinatorial manifolds with complementarity ..... *Basudeb Data* 385

Deformations of complex structures on $\Gamma\backslash SL_2(C)$ ..... *C S Rajan* 389

Differential subordinations concerning starlike functions ..... *S Ponnusamy* 397

On the structure of stable random walks ..... *Jon Aaronson* 413

$L^1(\mu, X)$ as a complemented subspace of its bidual ..... *T S S R K Rao* 421

Stresses in an elastic plate lying over a base due to strip-loading ..... *Raj Kumar Sharma and Nat Ram Garg* 425

Number 3, August 1994

The Laplacian on algebraic threefolds with isolated singularities ..... *Vishwambhar Pati* 435

The Hoffman–Wielandt inequality in infinite dimensions ..... *Rajendra Bhatia and Ludwig Elsner* 483

Rigidity problem for lattices in solvable Lie groups ..... *A N Starkov* 495

Some remarks on the Jacobian question ..... *Shreeram S Abhyankar* 515

On polynomial isotopy of Knot-types ..... *Rama Shukla* 543

Row-reduction and invariants of Diophantine equations ..... *N J Wildberger* 549

Positive values of non-homogeneous indefinite quadratic forms of type (1, 4) ..... *V C Dumir and Ranjeet Sehmi* 557

Extended Kac–Akhiezer formulae and the Fredholm determinant of finite section Hilbert–Schmidt kernels..... *S Ganapathi Raman and R Vittal Rao* 581

A proof of Howard's conjecture in homogeneous parallel shear flows ..... *Mihir B Banerjee, R G Shandil and Vinay Kanwar* 593

Number 4, November 1994

Special issue on "Spectral and inverse spectral theory"

Foreword 597

Scattering theory for Stark Hamiltonians ..... *A Jensen* 599

L^p-Estimates for Schrödinger operators ..... *S Nakamura* 653

On N-body Schrödinger operators ..... *H Isozaki* 667

A conjecture for some partial differential operators in $L^2(R^n)$ ..... *Pl. Muthuramalingam* 705

The geometry and spectra of hyperbolic manifolds ..... *P D Hislop* 715

Inverse spectral theory for Jacobi matrices and their almost periodicity ..... *A J Antony and M Krishna* 777

Spectral shift function and trace formula ..... *Kalyan B Sinha and A N Mohapatra* 819

Proceedings of the Indian Academy of Sciences
Mathematical Sciences

Notes on the preparation of papers

Authors wishing to have papers published in the *Proceedings* should send them to

The Editor, Proceedings (Mathematical Sciences), Indian Academy of Sciences, C V Raman Avenue, P B No. 8005, Bangalore 560 080, India

OR

Prof. S G Dani, School of Mathematics, Tata Institute of Fundamental Research, Homi Bhabha Road, Bombay 400 005, India

Three copies of the paper must be submitted.

The papers must normally present results of original work. Critical reviews of important fields will also be considered for publication. Submission of the typescript will be held to imply that it has not been previously published, it is not under consideration for publication elsewhere and that, if accepted, it will not be published elsewhere. A paper in applied areas will be considered only on the basis of its mathematical content.

Typescript:

Papers should be typed double spaced with ample margin on all sides on white bond paper of size 280 × 215 mm. This also applies to the abstract, tables, figure captions and the list of references which are to be typed on separate sheets.

Title page:

(1) The title of the paper must be short and contain words useful for indexing.
(2) The authors' names should be followed by the names and addresses of the institutions of affiliation.
(3) An *abbreviated running title* of not more than 50 letters and spaces should be given.

Abstract:

Each paper must be accompanied by an abstract describing, in not more than 200 words, the significant results reported in the paper.

Keywords:

Between 3 and 6 keywords must be provided for indexing and information retrieval.

The Text:

The paper should preferably start with an introduction in which the results are placed

in perspective and some indication of the methods of proof is given.

1. *Markings*: The copy intended for the printer, should be marked appropriately to make it unambiguous. The following conventions may be followed for the purpose of indicating special characters: (A list of the special characters is included at the end).

a) Indicating characters by underlining

Italics	Single underline
Bold face	Wavy underline
Greek	Blue underline
Fraktur (Gothic)	Red underline
Script	Green underline
Open face	Brown underline

All parameters in equations are normally printed in italics and numerals in upright typeface.

b) In doubtful cases the position of superscripts and subscripts (exponents and indices) should be clearly marked, for example $b_{\uparrow}$, $a^{\downarrow}$, $b^{\heartsuit}$, $b_{\triangle}$, etc.

c) Formulae extending beyond the printed line will be broken by the typesetter at an appropriate place; to avoid any expensive alterations at the proof stage the author may indicate in the manuscript where the formulae should be broken.

d) Various likely ambiguous spots may be explained by pencilled notes in the margin. The following symbols are frequently confused and need to be clarified.

$\circ, o, \upsilon, O, 0$; $\cup, \bigcup, U$; $\times, x, X, \chi, \kappa$; $\dot{\vee}, v, \nu$; $\theta, \Theta, \phi, \varphi, \Phi, \varnothing$; ψ, Ψ; $\varepsilon, \in$;
$a, \alpha, \propto$; B, β; r, γ; $\sigma, 6$; $+, \dagger$; $i, \imath$; a', a^1; the symbol a and the indefinite article a;
also the handwritten Roman letters:
c, C; e, l; I, J; k, K; o, O; p, P; s, S; u, U; v, V; w, W; x, X; z, Z.

2. *Notations and style*: Notation and style should be chosen carefully, keeping the printing aspect in mind. The following table indicates preferred forms for various mathematical usages.

preferred form	instead of	preferred form	instead of
$A^*, \tilde{b}, \gamma', \mathbf{v}$, etc.	$\overline{A}, \hat{b}, \check{\gamma}, \vec{v}$, etc.	$\exp(-(x^2+y^2)/a^2)$	$e^{-((x^2+y^2)/a^2)}$
lim sup, proj lim	$\overline{\lim}, \underline{\lim}$		
$f: A \to B$	$A \xrightarrow{f} B$		
$\sum_{n=1}^{\infty}$	$\sum_{n=1}^{\infty}$	$\dfrac{\cos(1/x)}{(a+b/x)^{1/2}}$	$\dfrac{\cos\dfrac{1}{x}}{\sqrt{a+\dfrac{b}{x}}}$

Tables:

All tables must be numbered consecutively in arabic numerals in the order of appearance in the text. The tables should be self-contained and must have a descriptive title.

Figures:

A figure should be included only when it would be substantially helpful to the reader in understanding the subject matter. The figures should be numbered consecutively in arabic numerals in the order of appearance in the text and the location of each figure should be clearly indicated in margin as "Figure 1 here". The figure captions must be typed on a separate sheet.

Line drawings must be in Indian ink on good quality tracing paper. Lines must be drawn sufficiently thick for reduction to a half or third of the original size (0·3 mm for axes and 0·6 mm for curves are suggested).

List of symbols:

For the convenience of the printers, authors should attach to the manuscript the complete list of symbols identified typographically.

References

References should be cited in the text by serial numbers only (e.g. [3]). They should be listed alphabetically by the author's name (the first author's name in the case of joint authorship) at the end of the paper. In describing each reference the following order should be observed: the author's name followed by initials, title of the article, the name of the journal, the volume number, the year and the page numbers. Standard abbreviations of journal titles should be used. It would be worthwhile to cross-check all references cited in the text with the ones given at the end.

A typical reference to an article in a journal would be like:

[1] Narasimhan M S and Ramanan S, Moduli of vector bundles on a compact Riemann surface, *Ann. Math.* **89** (1969) 14–51

A References to a book would be on the following lines:

[8] Royden H, Invariant metrics on Teichmüller space, in: Contributions to analysis (eds) L Ahlfors *et al* (1974) (New York: Academic Press) pp. 393–399

Footnotes:

Footnotes to the text should be avoided if possible. If unavoidable, they should be numbered consecutively, and typed on a separate sheet.

Proofs:

The journal is now typeset by computer photocomposition and only a page-proof is supplied to authors. While the process yields better results, it makes corrections at proof stage very difficult and expensive. Deleting a letter or word in the proof can mean resetting the whole line or paragraph. Similarly, addition of a sentence or paragraph might lead to resetting the whole page and sometimes even the whole article.

Authors are requested to prepare the manuscript carefully before submitting it for publication to minimize corrections and alterations in the proof stage which increase publication costs. The proofs sent to the authors together with the reprint order form must be returned to the editorial office *within two days of their receipt.*

Reprints:

50 reprints of each article will be supplied free of charge.
